- An integrated structure with built-in contacts that can reduce control panel depth.
- A wide variety of sockets are available to simplify wiring.
- Thin type and Standard types available for your control panel design. Select an optimum one to match your control panel design.

## - Features

Supporting smaller and thinner operator's panels
A structure that integrates operator and contacts to reduce panel-mounting depth. Terminals extending to the rear of the switch ensure easy wiring work.

- Standard type $: 28.4 \mathrm{~mm}$ deep
- Thin type $: 35.9 \mathrm{~mm}$ deep
- Emergency stop : 28mm deep

## A wide variety of sockets reduce wiring work

Switches combine with a variety of sockets to simplify wiring.

- Applicable as a fast-connection terminal switch by combining the socket with a switch.
- Easily wired by simply removing the wire sheath and inserting the wires while pressing the insertion slot button (no soldering required).
- Incorporates a branch terminal for easy branching.

## Safety

- FUJI's original Trigger Action mechanism is used in the emergency stop pushbuttons. They are suitable for emergency stop and safety. This mechanism prevents the contacts from moving untill the button in pushed and locked. (See page 04/180)
- Connector socket

- Applicable as a connector by combining the socket with receptacles.
- The socket holds the receptacles, making it easy to connect the receptacle to the switch with a single operation.
- Socket for PC board

- Applicable as a switch for PC board by combining the socket with a switch.
- Pattern wiring reduces the number of wiring man-hour and helps prevent faulty wiring.

## ■ Degree of protection

- The table below shows the degree of protection stipulated by IEC (International Electrotechnical Commission) standard (IEC 60529)

$$
\text { IP- } 65
$$

| Class | Degree of protection against human contact or penetration by a foreign object |  | Degree of protection against ingress of water |  |
| :---: | :---: | :---: | :---: | :---: |
| 5 |  | - Normal operation secured even if the dust that can pass through screen of $75 \mu \mathrm{~m}$ mesh invades. | Protection against water jets | - Protected against water jet from all directions. <br> - Water projected by nozzle (6.3mm-inner dia.) from all directions at 29.4 kPa for 3 min at a distance of 3 m . |
| 6 |  | - The dust which can pass through screen of $75 \mu \mathrm{~m}$ mesh shall not invade. | Protection against powerful water | - Protected against powerful water jet from all directions. <br> - Water projected by nozzle (12.5mm-inner dia.) from all directions at 98 kPa for 3 min at a distance of 3 m . |

## ■ Contact reliability

FUJI has confirmed that the product can be used in 1 mA circuit conditions at 5 V AC or DC . The operable range, however, may vary depending on the operational ambient conditions and type of load.

## Command Switches <br> AR16 and DR16, AF16 and DF16 <br> Specifications

Lamp ratings and current consumption

- Illuminated pushbutton switch, Pilot lights

| Applied method | Lamp operational voltage | High-brightness LED lamp |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Type | Lamp rated voltage | Current consumption |
| without transformer | 6V AC/DC | DR6L695-A $\square$ | 6V AC/DC | Green, Blue: $11 \mathrm{~mA} \mathrm{AC}, 7.5 \mathrm{~mA}$ DC Red, Amber: 9mA AC, 7.5mA DC Orange: $10 \mathrm{~mA} \mathrm{AC}, 8.5 \mathrm{~mA}$ DC Yellow: $30 \mathrm{~mA} A C, 26 \mathrm{~mA}$ DC |
|  | 12V AC/DC | DR6L695-B $\square$ | 12V AC/DC | Green, Red, Amber, Blue: 7.5mA AC, 7.5mA DC Orange: 9mA AC, 8.5 mA DC Yellow: 11mA AC, 8.5mA DC |
|  | 24V AC/DC | DR6L695-E $\square$ | 24V AC/DC | Green, Red, Amber, Blue: 7.5mA AC, 7.5 mA DC Orange, Yellow: 9mA AC, 8.5mA DC |

Note: A box $\square$ indicates the luminous color. For details, see the "Combination of Illuminated pushbutton / pilot light color and LED lamp luminous color".
■ Combination of Illuminated pushbutton / pilot light color and LED lamp luminous color

| Illuminated pushbutton / pilot light color (lens color) |  | Luminous color of high-brightness LED lamp |  |
| :---: | :---: | :---: | :---: |
|  | Type |  | Type |
| Green | G | Green | DR6L695-[G |
| Red | R | Red | DR6L695-[R |
| White | W | Orange | DR6L695-■W |
| Yellow | Y | Yellow | DR6L695-■Y |
| Orange | A | Amber | DR6L695-■A |
| Blue | S | Blue | DR6L695-[S |

Note: ${ }^{41} \mathrm{~A}$ box $\boldsymbol{\square}$ indicates the lamp operational voltage. For details, see the "Lamp ratings and current consumption".

## ■ LED durability

| Type of lamp | Durability (reference) | Judgment criterion |
| :--- | :--- | :--- |
| LED lamp | Approx. 30000h | When the brightness is less than $50 \%$ of initial value. |

Note: The durability of LED lamp is a mean value in all colors.

■ Standard approved

| :--- | :--- |
| CSA C22.2 No.14 |  |
| TÜV: EN60947-5-1 | Pushbutton, Illuminated pushbutton: R50116757 <br> Selector: R50116759 <br> Pilot lights: R50116762 |
| CCC: GB14048.5 | Switches (except pilot ligths): 2003010305071068 <br> Pilot lights: 2003010305071044 |

## ■ Standard models approved by international standards

The standard models of AR16 and DR16, AF16 and DF16 series of the $\phi 16$ Command Switches meet UL / CSA requirements, China Compulsory Certification (CCC) standards, and TÜV EN standards, thus ensuring easier direct or indirect export to North America and European countries with no safety standard concerns.

## Safety Precautions

Read the Operating Instructions carefully before mounting, wiring, operating, servicing, or inspecting the command switch. Make sure that the Operating Instructions is delivered to the final user of the command switch.

- The safety precautions are classified into two levels, Warning and Caution, with meanings described as follows:

| $\triangle$ Warning | : If operation is incorrect, a dangerous situation |
| :--- | :--- |
| may occur, resulting in death or serious injuries. |  |

An item described under CAUTION may result in a serious accident, depending on the situation.

| 亿 Warning |
| :--- |
| - Do not touch or approach any live part while power is supplied. An |
| electric shock or burning may result. |
| - Be sure to turn off the power before mounting, dismounting, wiring, |
| or inspecting the product. An electric shock, burning from short- |
| circuiting or equipment malfunction may result. |

## $\triangle$ Caution

- Wire the product according to the wiring instructions in the Operating Instructions. Make sure that the size of the wires is suitable for the voltage and applied current. The wrong wiring may result in fire, accidents or malfunctions.
- Treat the product as industrial waste when it is to be discarded.

## - Panel cutout, mm

- Standard type (common)

When requiring rotation prevention or positional stabilization

Note: When changing the operating angle position of the selector switch, the panel cutout also requires an angle change.

- Thin type (The panel cutout dimension varies depending on the operator or lens shape.)
- Rectangular type

- Square type

- Round type

When requiring rotation prevention or positional stabilization

Note: When changing the operating angle position of the selector switch, the panel cutout also requires an angle change.

## ■ Installation on panel

- As shown in the figure below, insert the switch main unit into the mounting hole from the front of the panel, attach the washer and tightening nut from the back of the panel, and securely tighten the nut with the wrench (AHX601).
Note: The proper tightening torque is 0.6 to $1.0 \mathrm{~N} \cdot \mathrm{~m}$.

Note: *1 Do not use pliers or other improper tools to tighten the nut, or tighten it excessively, Otherwise, the nut may be damaged or the switch may malfunction.

## - Thin type

As shown in the figure below, insert the switch main unit into the mounting hole from the front of the panel, attach the panel retainer from the back of the panel, and securely tighten the nut with the wrench (AHX601).
Note: The proper tightening torque is 0.6 to $1.0 \mathrm{~N} \cdot \mathrm{~m}$.

Note: *1 Do not use pliers or other improper tools to tighten the nut, or tighten it excessively, Otherwise, the nut may be damaged or the switch may malfunction.

## ■ Applicable panel thickness

Tables 1 and 2 show applicable panel thickness.
Table 1 Standard type (AR16/DR16 series)

| Mounting condition | Applicable panel <br> thickness, mm |  |
| :--- | :--- | :--- |
| Without accessories | 1 to 6 |  |
| With | Pccessories | Protective cover |
|  | Dust-tight cover | 1 to 4 |
|  | Various sockets | 1 to 4 |
|  | Terminal cover | 1 to 3.2 |
|  | Protective cover + various sockets | 1 to 3.2 |
|  | Protective cover + Terminal cover | 1 to 1.6 |
|  | Dust-tight cover + various sockets | Cannot be used. |
|  | Dust-tight cover + Terminal cover | Cannot be used. |

## Command Switches <br> AR16, DR16 and AF16, DF16 <br> Panel cutout and mounting

Table 2 Thin type (AF16/DF16 series)

| Mounting condition | Applicable panel <br> thickness, mm |  |
| :--- | :--- | :--- |
| Without accessories | 1 to 6 |  |
| With | Protective cover | 1 to 4 |
|  | Various sockets | 1 to 3.2 |
|  | Terminal cover | 1 to 3.2 |
|  | Protective cover + various sockets | 1 to 3.2 |
|  | Protective cover + Terminal cover | 1 to 3.2 |

■ High-density mounting
Minimum mounting space (pitch) without accessories, mm

- Standard type (AR16/DR16 series)

Illuminated pushbuttons, pushbuttons, selectors, and pilot lights
(1)Rectangular
(2)Square
(3)Round, dome

Note: Determine the mounting pitch by taking the operatbility and wiring work into consideration.

- Thin type (AF16/DF16 series)

Illuminated pushbuttons, pushbuttons, selectors, and pilot lights
(1)Rectangular
(2)Square
(3)Round, dome

Note: Determine the mounting pitch by taking the operatbility and wiring work into consideration.

Minimum mounting space (pitch) with accessories, mm

- Protective cover AHX669 and AHX826 (Standard type)

${ }^{1}$ 43: with the cover fully opened
- Protective cover AHX671
(Standard type)

${ }^{1} 43$ : with the cover fully opened
- Protective cover AF6D826 (Thin type)

- Dust-tight cover AHX668 (Standard type)

- Dust-tight cover AHX822 (Standard type)

- Minimum mounting spaces (pitch) with sockets, such as FastConnection socket (AR6S690), connector socket (AR6S691) and PC board-use socket (AR6S692) are the same as those without accessories.

Note: Determine the mounting pitch by taking the operability and wiring workability into consideration.

## Safety Precautions

Read the Operating Instructions carefully before mounting, wiring, operating, servicing, or inspecting the command switch. Make sure that the Operating Instructions is delivered to the final user of the command switch.

- The safety precautions are classified into two levels, Warning and Caution, with meanings described as follows:

If operation is incorrect, a dangerous situation may occur, resulting in death or serious injuries.
If operation is incorrect, a dangerous situation may occur, resulting in minor to medium injuries or physical damage to equipment.

An item described under CAUTION may result in a serious accident, depending on the situation.

| $\bigwedge$ Warning |
| :--- |
| - Do not touch or approach any live part while power is supplied. An |
| electric shock or burning may result. |
| - Be sure to turn off the power before mounting, dismounting, wiring, |
| or inspecting the product. An electric shock, burning from short- |
| circuiting, or equipment malfunction may result. |

| $\bigwedge$ Caution |
| :--- |
| - Wire the product according to the wiring instructions in the Operating |
| Instructions. Make sure that the size of the wires is suitable for the |
| voltage and applied current. The wrong wiring may result in fire, |
| accidents, or malfunctions. |
| - Treat the product as industrial waste when it is to be discarded. |

## Method of replacing color lens, legend plate, and screen Replacing color lens (screen)

- Standard type (AR16/DR16 series)

To remove the color lens, fit the color lens remover (AHX618) to the grooves in the color lens and pull out the lens, or pry the lens lightly with a small slotted screwdriver.

- Thin type (AF16/DF16 Series)

To remove the color lens, pry the lens lightly with a small slotted screwdriver.
If one side of the color lens is separated from the screen, further insert the screwdriver and remove the color lens together with the screen. Do not pry the packing when doing this.
To fit the color lens, align the protrusion of switch main body with the groove of the screen, and press-fit them.

- Removing screen

Insert the tip of a small slotted screwdriver into the groove and press down the screwdriver in the direction of the arrow.

# Command Switches <br> AR16, DR16 and AF16, DF16 <br> Notes on use 

## Fitting color lens to screen

- Rectangular type

Set the textured surface side of the legend plate with the screen side, then press-fit the color lens. When press-fitting, make sure that your fingers do not touch the reflective surface inside the screen.

- Square type

Set the textured surface side of the legend plate with the screen side, align the screen protrusion with the color lens groove, and press-fit together. When press-fitting, make sure that your fingers do not touch the reflective surface inside the screen.

- Round type

Align the protrusion of the legend plate with the groove of the screen, also align the screen protrusion and color lens groove, and press-fit together. When press-fitting, make sure that your fingers do not touch the reflective surface inside the screen.

- For alternate action type of illuminated pushbutton switches and pushbutton switches, do not remove the color lenses (screens) in locked (depressed) state. The internal mechanisms may be damaged.

## Engraving legend plate

Engrave the surface of the legend plate.

- Material: Acrylic resin
- Engraving depth: 0.5 mm max.
- Paint: Use a paint that has alcohol as its main ingredient, such as melamine paint, phthalic acid paint, or acrylic paint.

## - Legend plate size

| Shape | Size, mm |
| :---: | :---: |
| Rectangular |  |
| Square |  |
| Round | Textured surface (back side) |

Notes: ${ }^{11} \mathrm{~A}$ legend sheet may be used, provided that the external dimensions do not exceed the corresponding outer size specified in the above table and that the thickness is 0.1 mm or below. (No legend sheets are provided with the product. Please prepare on customer side.)
${ }^{2}$ Do not engrave any part other than the legend plate.
Changing the operating angle position of selector switch The bezel is separated from the knob (key), which makes it easy to change the operating angle position in $45^{\circ}$ increments (the AR16 series rectangular or square type only).
The following figures show a knob type example. The key type is the same.

Fuji Electric FA Components \& Systems Co., Ltd./D \& C Catalog

## Method of replacing lamp

- To remove the LED lamp, insert the lamp changer (AHX672) in the LED lamp and pull out the LED lamp.
To mount the LED lamp, align the lamp terminal side of the main unit with the electrode side of the LED lamp, lightly hold the lamp by hand or with the head of the lamp changer (AHX672), and insert the lamp.
The LED lamp has no polarity, so it can be powered by either $A C$ or $D C$.

- Handling of LEDs

LED whose luminous color is green or blue is sensitive to static electricity. Be careful when handling the LED. Take thorough measures against static electricity and surges when handling the product. The following anti-electrostatic measure is recommended.
Use a wristband or anti-electrostatic glove when replacing LED lamps.

## Wiring

- Wiring to tab terminal Use 110 ( 2.8 mm ) series receptacles for tab terminals.
- Pay attention to the following points when soldering. Type of solder: Use resin-core solder.
Use a soldering iron with a maximum power consumption of 60W (350(C) within five seconds. Make sure that the terminal is free of tension during soldering. Also, do not deform the terminal.
- The melting point of lead-free solder is slightly high, which may make soldering difficult. Use a soldering iron that has a large soldering tip or high heat generation.
- Connectable wires

Two solid wires with a maximum diameter of 0.8 mm (solder) One stranded wire with a maximum area of $0.75 \mathrm{~mm}^{2}$ (solder) Flat-type connection terminal
(2.8 -1.25-5) 0.5 to $1.25 \mathrm{~mm}^{2}$
(2.8 $\square-0.5-5$ ) 0.2 to $0.5 \mathrm{~mm}^{2}$

- Use of contact blocks

When using NO and NC contacts in the same contact block, avoid connection that involves opposite polarity or wiring from different types of power supply.

- For wiring to adjacent terminals, use the terminal cover (AR6Y261) to prevent short-circuit, or an insulation tube to assure isolation. For solder terminals, caution is required if thick wires, in particular, are connected or a large quantity of solder is used.
- Terminal arrangement

| Model | Circuit diagram (example) | Terminal arrangement (view from the terminal (back) side) |
| :---: | :---: | :---: |
| Illuminated pushbuttons (2PDT) |  |  |
| Pushbuttons and selector switches (2PDT) |  |  |
| Pilot lights |  | [TOP] ( $\boldsymbol{\nabla}$ ) Display side |

Note: Only the left-side contact is applicable to the SPDT mechanism.

# Command Switches <br> AR16, DR16 and AF16, DF16 <br> Notes on use 

## ■ LED Lamps

- LED lamp malfunctioning (incorrect lighting)

The LED lamp incorporates a circuit to prevent malfunctioning. Compared with conventional models, this LED lamp is less likely to malfunction, but it incorporates no absolute countermeasures.
A minute current (approximately 0.25 mA ) turns on the LED lamp. A leakage current from the surge absorption circuit or noncontact circuit, or stray capacitance between cables, may also turn on the LED lamp.
In this case, a countermeasure (e.g., attaching a resistor in parallel with the LED lamp) is required.

- Countermeasure against malfunctioning

Malfunctioning can be prevented by connecting a shunt resistor $(R)$ in parallel. The resistance in that case varies with the model and operating conditions.

In the case of 24 V DC
R: $10 \mathrm{k} \Omega(0.5 \mathrm{~W})$
(b)
In the case of 24 V AC
R: $2 \mathrm{k} \Omega(2 \mathrm{~W})$

- The permissible fluctuation range for the operating voltage of the 6 V model is $\pm 5 \%$ and that for the 12 V or 24 V model is $\pm 10 \%$. If the operating voltage is always $5 \%$ or $10 \%$ higher, select a resistor that will make the operating current the same as or lower than the rated current, and connect the resistor in series to the LED lamp.
- Calculation of external resistance

Example: Connecting a 24 V red LED to a 48 V circuit
External resistance $[\Omega]=\frac{\text { Circuit voltage }[\mathrm{V}] \text { - Rated voltage }[\mathrm{V}]}{\text { Rated current }[\mathrm{A}]}$

$$
=\frac{48-24}{7.5 \times 10^{-3}}=3200[\Omega]
$$

$\rightarrow$ Therefore, use an external resistor of $3.3 \mathrm{k} \Omega 1 \mathrm{~W}$.
(Select a resistor with sufficient wattage.)

- Surges

High-brightness LED products use elements that are sensitive to static electricity. Keep in mind that an unusual voltage, such as a surge voltage, may cause the product to malfunction.

## - Selector Switches

- Knob type

The knob can be operated by turning it lightly. Be careful to operate the knob with a torque not exceeding $1 \mathrm{~N} \cdot \mathrm{~m}$.

## - Key type

- Types of keys

Five types (B, C, D, E, and F) are available in addition to the standard type (type A).
Make sure that the symbol on the key coincides with the symbol on the switch.

- Fully insert the key into the switch and turn the key. Do not pull on the key while turning it.
- Operate the key with a torque not exceeding $0.1 \mathrm{~N} \cdot \mathrm{~m}$.
- Do not forcibly insert or extract the key.
- Do not attempt to operate the switch with the key insufficiently inserted or insert the wrong key. Otherwise, a malfunction may result.

## ■ Fast-connection socket

- Connectable wires
- Standed wire : 0.3 to $0.75 \mathrm{~mm}^{2}$ (AWG22 to AWG18)
- Single wire : 0.5 to 1 mm dia.
- Recommended ferrule : Phoenix Contact, part number AIO, 34-8TQ

Wire size : $0.34 \mathrm{~mm}^{2}$ (22 AWG)
Crimping tool : CRIMPFOX UD6-6
Note : Use a crimping tool with a hexagonal or round cross section.
Sheath external diameter: 2.8 mm dia. Max.

## - Wire sheath stripping length

Note : If ferrules are used, securely insert the wire sheath inside a resin shell. Cut the end of the wire the same length as the ferrule or cut it at a position approximately 0.5 mm longer.

Check the length using the strip gauge on the surface of the socket displayed on the model nameplate. If standed wire is used, twist the wire so that there are no loose strands after stripping.

## - Connection method

(1) Insert the wire while pressing the button on the insertion slot with a small flat-head screwdriver (tip width of 2 mm max.). Release the button when the wire is all the way seated in the switch.
(2) When disconnecting the wire, pull out the wire while pressing the button on the insertion slot with a small flathead screwdriver. Cut the bare part of the wire if it was previously used, and then newly remove the sheath to reuse the wire.
(3) Insert a single wire for each insertion slot.
(4) Do not pull on the wires with excessive force ( 15 N or more) when you perform wiring. Make sure that not extemal force is exerted on the wires after wiring has been completed. The next time that a wire is inserted, the parts that support the wire may change shape and result in conduction failure.

- Terminal arrangement (Rear-side View)

Fuji Electric FA Components \& Systems Co., Ltd./D \& C Catalog

## Connector sockets

- Connectable wires Stranded wire: 0.5 to $0.75 \mathrm{~mm}^{2}$ (20AWG to 18AWG)
- Arrange for a receptacle terminal separately. Nichifu Co., Ltd.: CMC62895F
- Check the insertion position and insert the receptacle terminal into the socket after connecting the wires to the receptacle terminal. (The wires once connected cannot be disconnected.) Lightly pull the wires and check that the receptacle terminal is securely connected to the socket.

- Align the $\boldsymbol{\Delta}$ mark of the socket and the TOP ( $\boldsymbol{\nabla}$ ) mark of the switch, and put the socket and switch together.

- Minimum mounting space (pitch), mm

Obtain the mounting pitch based on a reference line to minimize the cumulative error.
Make sure that the centering difference between the switch and the PCB socket does not exceed 0.25 mm .

- Apply the following panel cutout dimensions (in mm) to stabilize the operator position of the switch when combined with the socket.

- Mount the switch to the panel. Make sure that the switch is free of any bends.
- PC board processing dimensions (in mm ) as viewed from the socket mounting side.

- The reference is the center of the socket (switch).
- Switch terminal arrangement (as viewed from the socket mounting side)

- Insert the socket so that the lever will be located in the 5 mm diameter through hole of the PC board. Set the lever to the lock position as viewed from the socket mounting side.

- Combine the switch-mounted panel with the socket on the PC board, and solder the socket terminal.

- Combine the PCB socket and the panel while making sure that the socket terminal does not fall off, and turn over the socket to do the soldering. Do not leave any space between the PC board and socket.
- After combining them, check that the lever as viewed from the soldering side is in the lock position, and solder the terminal.

## Command Switches <br> AR16, DR16 and AF16, DF16 <br> Notes on use

- Pay attention to the following points when soldering.
- Type of solder: Use resin-core solder.
- Finish soldering at $350^{\circ} \mathrm{C}$ within 5 seconds.
- Do not wash the socket.
- Solder the socket so that no flux adheres to it.
- The melting point of lead-free solder is slightly higher than lead solder, which may make soldering difficult. Use a soldering iron with a large tip or that provides a high heat generation.
- Using a spacer between the panel and the PC board Make sure that the distance shown in the figure below is maintained between the panel and the PC board. The spacer dimensions vary with the thickness of the mounting panel.

| Series | $A(\mathrm{~mm})$ |
| :--- | :--- |
| AR16/DR16 | $30.2 \pm 0.2$ |
| AF16/DF16 | $37.7 \pm 0.2$ |

- Mounting and removing PC board sockets
- Removing

Push down the socket levers all the way viewed from the soldering side in the direction of the free position and remove the PC board sockets. After removal, the socket levers will return to the lock position automatically.

- Mounting

Check that the socket lever as viewed from the soldering side is in the lock position, lightly insert the terminal and socket so their position is aligned with the switch on the panel, press the socket-mounting portion of the PC board, and securely insert the entire socket until the socket lever snaps. (Check that the lever as viewed from the soldering side is in the lock position.)

- Use the switch within the following rated voltage range when the PCB socket is used.
- Rated insulation voltage: 60V
- Rated operational voltage: 24 V
- Conventional free air thermal current: 3A
- Use a 1.6 -mm-thick double-sided through-hole printed circuit board made of copper-plated laminated epoxy resin on a woven glass fabric base.
- In case of standard type (AR16 and DR16 series), beware that the adopted models are not allowed to attach the protective cover to some models and that the adopted models cannot be mounted to some models afterward.

## Others

- Operation

Do not hit or flip the button, or the button may be damaged.
Be sure to operate the button by hand.
Do not pull the button if the switch is an alternate action type.

- High-density mounting of illuminated type

When continuously lighting pilot lights or pressing illuminated pushbuttons, keep in mind that the ambient temperature may exceed the rated value due to the heat radiated by the lamp. Be sure to ventilate the lamp /switch if the mounting panel is not made of metal or if the mounting panel is an enclosed type.

- Usage locations
- Be sure to use and store the product within the rated ambient temperature and humidity ranges.
- Although the product resists ordinary cutting oils and coolant oils, do not use the unit in places where special oils may be sprayed onto the product.
- If dusts or filings accumulate in the gap between the button and the frame, the switch may fail to operate normally. Take appropriate measures, such as using a dust-proof protective cover, if the switch is to be used in places that are subject to dusts or filings.
- The AR16/DR16 series and AF16/DF16 series are for indoor use. Make sure that the product is not exposed to direct sunlight.
- Do not use the product in the places that are subject to the adverse effects of ozone or corrosive gases.

# Command Switches <br> AR16, DR16 and AF16, DF16 <br> Rating and specifications/AR16V 

## Integrated Contacts Structure Emergency stop pushbutton switches AR16V

## ■ Features

- Up to four sets of contacts in a one-piece structure with a panel depth dimension of 28 mm (non-illuminated type).

Non illuminated type
Illuminated type

- Both pull or turn reset methods are supported.
- Two button diameters are available: 32 mm (AR16V0) and 40 mm (AR16V1).
- Safety trigger-action mechanism that prevents the contacts from operating until the switch is locked, even if people or objects accidentally come into contact with the switch.
- Direct opening mechanism for NC contacts to ensure that the contacts can be opened even in the unlikely event that they become fused. $\theta$
- IP65 protection for operating section.

- RoHS compliance (EU Directive 2002/95/EC) is a standard feature.
- Compliance with UL/CSA standards, China Compulsory Certification (CCC) standards, and TÜV (EN standards).
- CE marking.

## ■ Specifications (indoor use)

| Item |  | AR16V |
| :---: | :---: | :---: |

| Contact rating code | 年年ing current $\cdot$ Braeking current |  |
| :--- | :--- | :--- |
|  | 125 V | 250 V |
| R300 | 0.22 A | 0.11 A |

## ■ Contact reliability

- FUJI has confirmed that the product can be used in 1 mA circuit conditions at 5V AC or DC. The operable range, however, may vary deperding on the operational ambient conditions and type of load.

■ Operating characteristic

| Operation | Push-lock, turn-reset or pull-reset |
| :--- | :--- |
| Ave. required operating force | 25 N |
| Operating travel | Approx. 5.4mm |
| Operation angle | Approx. $45^{\circ}$ |
| Required return force (pull-reset) | 20 N |
| Required return force (tarn-reset) | $0.3 \mathrm{~N} \cdot \mathrm{~m}$ |

$\square$ Mass

| Type | 1NC | 2NC(1NO+1NC) | 4NC(2NO+2NC) |

| Wrench | AHX601 (AH9A601) <br> When installing a command switch on a panel, this tool is useful for tightening the switch firmly and efficiently. |  |
| Terminal cover | AR6Y262 <br> Protective cover for insulation between terminals and live parts. Note : Dimensions when connected with a switch (unit : mm) <br> - Wiring work should be made first , and attach the cover to the switch. |  |
| Legend plate for AR16V emergency stop | AR6P719-*1,2 <br> - Plate color : Yellow <br> - Letter color : Black |  |

## ■ Notes on use

## Safety Precautions

Read the Operating Instructions carefully before mounting, wiring, operating, servicing, or inspecting the command switch. Make sure that the Operating Instructions is delivered to the final user of the command switch.

- The safety precautions are classified into two levels, "WARNING and CAUTION", with meanings described follows.
$\uparrow$ WARNING
Indicates a potentially hazardous situation, which, if not avoided, could resuit in death or serious injury.

Indicates a potentially hazardous situation, which, if not avoided, may result in minor or moderate injury and/or damage to the equipment.

An item described under "CAUTION" may resuit in a serious accident, depending on the situation.

## $\triangle$ WARNING

- Do not touch or approach any live part while power is supplied. An electric shock or burning may result.
Be sure to turn off the power before mounting, dismounting, wiring, or inspecting, the product.
An electric shock, burning from short-circuiting, or equipment malfunction may result.

## $\triangle$ CAUTION

- Wire the product according to the wiring instructions in the Operating Instructions. Make sure that the size of the wires is suitable for the voltage and applied current.
The wrong wiring may result in fire, accidents, or malfunctions.
- Treat the product as industrial waste when it is to be discarded.

## - Panel cutout (mm)

## ■ Applicable panel thickness

The applicable panel thickness is 1 to 6 mm . When the terminal cover (AR6Y262) is used, however, the applicable panel thickness will be 1 to 3.2 mm .

## ■ High-density mounting

The following minimum mounting pitch applies to high-density mounting.

Note : Detemine the mounting pitch by taking the operability and wiring workability into consideration.

## - Installation on panel

As shown in the figure below, insert the switch main unit into the panel cutout from the front of the panel with the top of the switch main unit (marked with an inverted triangular) facing upward. Then, use a tightening wrench (AHX601) and secure the unit with a washer and tightening nut from the rear of the panel.
Note : The proper tightening torque is 0.6 to $1.0 \mathrm{~N} \cdot \mathrm{~m}$.

*1 : Do not use pliers or other improper tools tighten the nut, and do not tighten it excessively, or the nut may be damaged or switch may malfunction.

## $\square$ Wiring

- The wiring to this switch must be soldered. Keep the following items in mind when soldering.
- Type of solder : Use resin-core solder.
- Use a soldering iron with a maximum power consumption of 60 W $\left(350^{\circ} \mathrm{C}\right)$ within five seconds. Make sure that the terminals is free of tension during soldering. Also, do not deform the terminal.
-Lead-free solder has a high melting point, but the specific melting point depends on the type of lead-free solder. This may cause difficulty in soldering. Be careful not to overheat the solder if a soldering iron with a large soldering tip or a large heating capacity is used. Keep in mind that overheating the solder may resuit in product malfunctioning.
- Connectable wires

One Solid wires with a maximum diameter of 1.0 mm
One standed wire with a maximum area of $0.75 \mathrm{~mm}^{2}$

- For wiring to adjacent terminals, use the terminal cover (AR6Y262) to prevent short-circuit, or an insulation tube to assure isolation. Care is necessary when two wires are connected together or a large quantily of solder is applied. In addition, keep in mind that overheating the tube may result in product malfunctioning if a heat-shrinking tube is used.
- Terminal arrangement

| Model | Circuit diagram (example) | Terminal arrangement <br> (view from the terminal (back) side) |
| :--- | :--- | :--- |
| Emergency stop pushbutton <br> switches |  | Top (marked with inverted triangular) |
| Emergency stop illuminated |  |  |

Note: If NO contacts are uesd in the contact configuration, they will be on the top of the unit (marked with the inverted triangular) and on the opposite side, regardless of the number of contacts.

## ■ Terminal caver (AR6Y262)

- Combination

The terminal cover must be attached in the correct direction. Make sure that the triangular on the terminal cover is aligned with the inverted triangular on the top of the unit. Also, when wiring the switch, check the alignment of these triangles and insert the wires correctly through the corresponding holes in the terminal cover.

## ■ Nameplate (AR6P719)

- Precautions

The nameplate must be attached. Attach the nameplate to an appropriate part, such as the panel, after removing the paper from the back of the nameplate.
Before attaching the nameplate, claen the surface to which the nameplate will be attached with alcohol.
The nameplate may come off if the surface is dirty or oily.

- Attachment Procedure (Example)

Remove portions (1) and (2) from the center of the nameplate, aligh the nameplate with the panel cutout, and lightly press on the front surface of the nameplate to attach it to the panel. Then remove portions (3) and (4), and press on the entire front surface of the nameplate to complate attaching it to the panel.

## ■ Others

## Operation

- Do not hit or flip the button, or the button may be damaged. Be sure to operate the button by hand.
- To unlock the switch, turn the button approximately $45^{\circ}$ clockwise (in the direction of the arrow) or pull out the button. Do not operate or handle the button with excessive force.
- Do not lock the emergency stop pushbutton switch during normal use. Push and lock the switch only in an emergency.

## Storage and Usage Locations

- Be sure to use and store the product within the rated ambient temperature and humidity ranges.
- Although the product resists ordinary cutting oils and coolant oils, do not use the unit in places where special oils may be sprayed onto the product.
- If dusts or filings accumulate in the gap between the button and the frame, the switch may fail to operate normally.
- This switch are for indoor use. Make sure that the product is not exposed to direct sunlight.
- Do not use the product in the places thet are subject to the adverse effects of ozone or corrosive gases.

Terminals $1-2: b$ (NC) contact terminals
Terminals 3-4: a (NO) contact terminals
Terminals a-b : Lamp terminals
